

"Superb! Couldn't be happier! Cut my Utility consumption over 90 percent! Ian Olmsted and the guys at Peninsula Solar are the best! After I saw a neighbor's installation, with the quality hardware, hard work, attention to detail, and integrity of Ian's crew, I decided to give them a go. Our solar array went prime time end of March (2017) and has been all, and more, that was promised. Ian works with you every step of the way, including pricing. When I see each day how much I'm NOT paying to the utility, I simply smile."

- Dennis H.

**System Specs:**

- 20 Module, 6.9 kW Array (345 Watts Ea.)
- 2 - Tesla Powerwalls (12.8 kWh Total)
- All Earth L-20, Dual-Axis GPS Tracker

# Peninsula Solar

Marquette • Northport

Established in 2011, Peninsula Solar is pioneering the installation of state of the art energy products. Thorough understanding of the trade combined with a dedication to best design and installation practices has driven the company's advancement into the forefront of a regional solar and energy storage revolution.

Top Right: LG RESU 10H  
Bottom Left: Tesla Powerwall

- **Work Smart:** Use our team of policy experts to secure grants and incentives as well as navigate and capitalize on ever-changing utility and governmental policy and regulations.
- **Protect Your Investment:** Future-Proof your installation with innovative, reliable equipment. Protect your investment with our comprehensive warranty and a smart operations and maintenance schedule.
- **Proper Planning:** Utilizing industry leading CAD based and financial modeling tools we can generate reliable energy estimates coupled with accurate financial calculations for any size project.
- **Intelligent Design:** Capitalize on our certified relationships with leading energy storage providers. Integrate emerging policies such as "time of use" rates as well as navigate peak demand charges by adding storage to your project. Maximize your systems returns using our experience while also providing security with efficient grid independent power.

**Utilize PV + Storage for True Energy Independence - Harvest and Manage Your Own Energy Needs**  
**Operate Free of Unreliable Utility Net Metering Policy with Self Consumption - Rely on Secure, Backup Power**

### ADJUSTABLE GROUND BASED INSTALLATION:

Installing the most durable and well engineered racking we can find is our goal. Using an organized repetitive material set allows our team to build site specific foundations and racking structures that cost less, adjust effortlessly, and stand up to mother natures greatest forces. Unique foundations such as our new and custom engineered helical ground screw system speed time of installation as well as provide a sustainable way to remove a project without leaving a trace.

### EXPERT ROOFTOP INSTALLATION:

With over 15 years of commercial and residential roofing expertise, Peninsula Solar offers true, best practice roofing techniques. Speed your design and installation time as while lending security to your project utilizing our experience on the roof. Safety is our primary concern on any job site as it applies to workers and building occupants alike. Water ingress can easily destroy buildings as well as their inhabitants quality of life. Proper training and strict adherence to material best practices has sustained our ability to install safely and confidently on any structure.

### COMMERCIAL / INDUSTRIAL / AGRICULTURAL / MUNICIPAL:

Our team members have experience in multi megawatt wind and solar development. From initial site survey and analysis to system commissioning, Peninsula Solar has the resources and experience to design and install large scale PV for varied applications. 2017 is a burgeoning year for our firm, privileged developing multiple large scale PV and commercial demand response storage systems.
